1. The first group of authors (e.g., [1, 2]) considers the problem of the stability of the motion of a system of particles in the field of a central body. The results of these studies are used in the theory of the motion of celestial bodies in the field of a central body.

2. The second group of authors (e.g., [3, 4]) considers the problem of the stability of the motion of a system of particles in the field of a central body. The results of these studies are used in the theory of the motion of celestial bodies in the field of a central body.

3. The third group of authors (e.g., [5, 6]) considers the problem of the stability of the motion of a system of particles in the field of a central body. The results of these studies are used in the theory of the motion of celestial bodies in the field of a central body.

4. The fourth group of authors (e.g., [7, 8]) considers the problem of the stability of the motion of a system of particles in the field of a central body. The results of these studies are used in the theory of the motion of celestial bodies in the field of a central body.

5. The fifth group of authors (e.g., [9, 10]) considers the problem of the stability of the motion of a system of particles in the field of a central body. The results of these studies are used in the theory of the motion of celestial bodies in the field of a central body.

6. The sixth group of authors (e.g., [11, 12]) considers the problem of the stability of the motion of a system of particles in the field of a central body. The results of these studies are used in the theory of the motion of celestial bodies in the field of a central body.

7. The seventh group of authors (e.g., [13, 14]) considers the problem of the stability of the motion of a system of particles in the field of a central body. The results of these studies are used in the theory of the motion of celestial bodies in the field of a central body.

8. The eighth group of authors (e.g., [15, 16]) considers the problem of the stability of the motion of a system of particles in the field of a central body. The results of these studies are used in the theory of the motion of celestial bodies in the field of a central body.

9. The ninth group of authors (e.g., [17, 18]) considers the problem of the stability of the motion of a system of particles in the field of a central body. The results of these studies are used in the theory of the motion of celestial bodies in the field of a central body.

10. The tenth group of authors (e.g., [19, 20]) considers the problem of the stability of the motion of a system of particles in the field of a central body. The results of these studies are used in the theory of the motion of celestial bodies in the field of a central body.
